

Download Study Guide Why Atoms Combine

Answers

Atoms. Atoms are the basic building blocks from which everything around us is built. This includes the computer before you, the floor beneath you, the air you breathe, and the stars you see at night. Atoms are the basic building blocks of everything around you. In order to really understand how atoms combine to form molecules, it's necessary to be familiar with their structure. The timeworn and pedestrian answer is simply "to get to the other side." Here are some creative and original answers: The chicken crossed the road. This exam includes some parts all of the quizzes I offer but you may purchase separately if desired. [
